DEVOPS ENGINEER

As an ITI intern specializing in System Administration and DevOps, I have gained comprehensive experience managing and optimizing IT infrastructure. My hands-on experience includes working with networking and Active Directory, scripting in Python, and containerizing applications using Docker and Kubernetes. Additionally, I have practical knowledge of cloud services, particularly AWS, where I have implemented and managed scalable solutions. I have the skills and knowledge to contribute effectively to IT operations and DevOps environments.

STRENGTHS AND EXPERTISE

Linux
Docker
AWS

Python
Kubernetes
Ansible

Networking
Bash
Automation

PROFESSIONAL EXPERIENCE

Linux System Admin
ISTQServer

October 2024 – Present

Accomplishments:

- Maintained and installed software across Linux-based environments, including Ubuntu and CentOS, ensuring server stability and performance.
- Automated server installations and configurations using tools like Netplan and VMware, streamlining deployment processes for HP ProLiant Gen8 and Gen9 servers.
- Managed server infrastructure through HP Integrated Lights-Out (iLO), enhancing server accessibility and monitoring.
- Conducted troubleshooting and diagnostics to identify and resolve system issues efficiently.
- Implemented RAID configurations and NIC bonding to optimize server performance and data redundancy.
- Ensured compliance with organizational policies by proactively maintaining secure and robust systems.

Tico for touristic investments
IT Specialist

August 2024 – October 2024

Accomplishments:

- Provided technical support for restaurants utilizing a restaurant management system, ensuring seamless operations and minimal downtime.
- Diagnosed and resolved hardware, software, and network issues, improving system reliability and performance.
- Collaborated with vendors and team members to implement system upgrades and troubleshoot application-related problems.
- Configured and maintained Windows Server environments and managed connectivity through Sophos firewalls and VNC tools.

EDUCATION

Misr University for Science and Technology

Bachelor in Computer Science

ITI

System Administration and DevOps Track

PROJECTS

Modernization of Node.js Application

Description: Successfully migrated a monolithic Node.js application to a cloud-native microservices architecture.

Key Achievements: Dockerization: Migrated the application to run in a Docker container, enabling flexible and portable deployment.

Microservices Refactor: Transformed the application into independently deployable services, enhancing scalability.

Amazon ECS Deployment: Deployed the containerized microservices to Amazon ECS, ensuring seamless integration with AWS services.

Impact: Improved scalability through independent service scaling. Enhanced resilience by isolating faults to individual services. Streamlined CI/CD processes with containerization and ECS.

MCSA Project

Description: Collaborated with a team to set up and manage a network environment, including web servers, domain controllers, and DNS configuration.

Key Achievements: Configured web servers and tested their accessibility. Set up domain controllers for ITI.LOCAL and Alex.ITI.LOCAL domains. Implemented DNS for web server resolution and established a child domain. Configured RODIC for enhanced security and manageability. Managed user permissions and access control across multiple PCs.

Impact: Successfully established a segmented and secure network environment. Demonstrated proficiency in network setup, security, and management.

CERTIFICATE

Red Hat Certified System Administrator (RHCSA)

Issued by: Red Hat

Date Issued: September 24, 2024

Valid Until: September 24, 2027

Credential ID: 240-175-729
